-Introduction of ajax
-In which application we use it
-working structure of ajax

*installing json-serve
npm install -g json-server

JSON(Javascript Object Notation):
-it is use to send and data from webserver.
-in this data store in string formate.
-that why to access data from server is fast and easy.

-json Data will look like javascript object
JSON.stringify() // covert object data into json formate
JSON.parse() // convert json data into javascript object

*how to start json-server with database file
step1: to destination folder
        cd folderpath
